

Serum Sperm Bank was established in 1991 to provide Serum IVF Clinic patients with a wide variety of best quality donor options. It is the first and biggest sperm bank in Greece and it has helped thousands of couples in more than 20 countries all over the world to make their dream come true.

Quality

Our core principle is that **“Best quality sperm gives best chance of pregnancy”**. So Serum Sperm Bank is the only one that provides exclusively high quality sperm in contrast with others, which offer different qualities at different prices.

Donors Screening

Serum Sperm Bank ensures a very strict donor screening procedure using state-of-the-art technological equipment. Donor screening consists of tests on all sexually transmitted diseases, genetic analysis, karyotyping and cystic fibrosis tests. We take pride in the fact that we are the only sperm bank that includes a **DNA fragmentation test** on the specimens before and after the cryopreservation so we can detect any possible alteration on the DNA in order to guarantee the highest pregnancy rate possible to all our patients. Furthermore, thanks to our excellent and pioneering cryo-preservation system we have managed to significantly increase the post-thawing specimen vitality levels.

Donors Selection

All our donors are carefully selected. Apart from the necessary medical screening we ensure that all our specimens come from young donors (most of them in their early 20s), from all races and with a rich variety of natural features. Additionally, the majority of our donors have a high educational background. In Serum Sperm Bank we further guarantee the high quality of our specimens by keeping extremely analytical records of our donors' family medical history as well as extensive reviews of our donors' psychological profiles.

DNA Library

Serum Sperm Bank offers another ground-breaking service to the future parents by collecting and preserving donors' DNA samples so, if need be, you can have access to and request any DNA tests, without the donor's physical presence being necessary.

Serum Staff

Our staff consists of highly qualified and specialized scientists, who provide couples (heterosexual as well as homosexual) and single women with a comprehensive consultation at all stages of the procedure. Under our guidance, future parents choose the specimen that best matches their preferences. In Serum Sperm Bank we guarantee absolute discretion and confidentiality throughout the whole selection process.

Legislation

Serum Sperm Bank abides by the national and EU legislation on sperm banks and ensures the application of WHO standards on sperm donation. Sperm donation is anonymous by law in Greece. **The protection of the donor's and the recipient's identity is absolute**, however, we are entitled to disclose those pieces of information necessary for the final selection of the donor, regarding characteristics such as skin, eye and hair colour, education, height, weight, hobbies and any other features that may be important for the patient.
